Teacher:Prof.MuhammadImran

WRITE A C++ PROGRAM THAT TAKES INTEGER VALUES FROM THE USER AND STORES THEM IN AN ARRAY, THEN COUNTS HOW MANY EVEN NUMBERS ARE PRESENT IN THAT ARRAY. USING THIS COUNT, CREATE A SECOND ARRAY WHOSE SIZE IS EXACTLY EQUAL TO THE NUMBER OF EVEN ELEMENTS, AND COPY ALL THE EVEN NUMBERS FROM THE FIRST ARRAY INTO THIS SECOND ARRAY.

```
#include<iostream>using
namespace std; int
main(){
    int arr[10], flag=0, x=0;
    cout<<"Enter values in Array"<<endl; for
    (int i = 0; i<10; i++)
        cin>>arr[i]; int
    arr2[10];
    for(int j=0; j<10; j++){
        if (arr[j]%2==0){
            flag++;
            arr2[x]=arr[j]; x++;}
    }
    cout<<"Even Numbers Copied From 1st Array Are:"<<endl; for (int
    k = 0; k<flag; k++)
        cout<<arr2[k]<<" "; return
    0;
}
```

OUTPUT:

The screenshot shows the Microsoft Visual Studio IDE with a C++ file named 'Lab Task Week 2.cpp'. The code in the editor includes a loop to input 11 numbers into an array and a function to print even numbers from the first array. The 'Output' window on the right shows the program's execution, including the input of values 2 through 11, the output of even numbers (2, 4, 6, 8, 10), and a message indicating the program exited successfully.

```
Enter values In Array
2
3
4
5
6
7
8
9
10
11
Even Numbers Copied From 1st Array Are:
2 4 6 8 10
D:\BS Artificial Intelligence\SEMESTER 2
.exe (process 10832) exited with code 0
To automatically close the console when
le when debugging stops.
Press any key to close this window . . .
