---	-----------

<pre>import java.util.Scanner;public class Cal1 { int sum(int a,int b){ int res; res=a+b; return res; } void mul(int a,int b){ int res; res=a*b; System.out.println("The Product Of "+a+" And "+b+" Is "+res); } }</pre>	CLASS1
--	--------

```
import
java.util.Scanner;public
class Cal2 {
    intdiv(inta,intb){ int
        res;
        res=a/b;
        returnres;
    }
    intmod(){
        Scanners=newScanner(System.in); int
        a=s.nextInt();
        intb=s.nextInt();
        int res;
        res=a%b;
        returnres;
    }
}
```
